HOW TO START FLYING WITH US?

POWERED BY RAM Virtual Lines (ram-vlines.com)

STEP BY STEP (1 page, 1 step)

1. Create an Account

> Go to our register page and fill the informations required (**pay attention to callsign**) then submit it. After that you will receive an email containing your forum login username and your discord code. By the way, you will find our discord link in this mail so just join it and please save your this mail until you are fully registered because it contains precious informations.

Note:
- *Your discord code is temporary conserved until you join our discord server and typed the command submitted (/r [CALLSIGN] [CODE]) in #commands channel. In addition if you don't know what discord is or how to use it please follow this link*
- *If you encountered problems with your inscription, join discord and ask for staffs. They will help you.*

**Why need I have an discord account linked to vRAM service?**
Firstly because it's help us to assure your identity, then you will be able to get any informations anywhere and anytime like your profile, others profile, live flights, booking, etc.. finally to tell you when your account is activated and to be safe about your account if you missed something.

2. Login

After your account activation, you can connect to your pilot panel. To do that, go to the [main page](#) then press login in the top menu:

Then a modal will popup like this: just enter your full callsign and your password before to press login.

Note:

- If you have troubleshooting with login, contact us quickly.

3. Booking

When you are logged-in you will be in your pilot page. If not the case, go to the home page and press "check-in".

In the pilot page you have two navigation menus:

The red one is accessible by mouse wheel click. Next press "booking" and search a flight available for you. After that, click and choose an aircraft. Finally you are ready to fly!

Note:

- Now you have booked a flight, so the next step is to get an acars software (page below).

4. ACARS Tracker

For the moment you can fly with SIMACARS. Our tracker is coming soon…
To install this software we made for you an simple installer available here.

Note:

    - For more informations about using SIMACARS follow this link.
    - All bugs from SimAcars cannot be corrected by us because we don't own it. By the way our status page is available to check our services development.

HAVE A NICE FLIGHT, ENJOY!
